

There's a new way to select medication for rheumatoid arthritis

PrismRA[®] can help your doctor find the best medicine for you.

Finding the right RA treatment for you

If your RA is flaring up and you're feeling unwell, then your doctor may suggest starting or escalating your dose for a type of medication called TNF inhibitor therapy. This drug class includes Enbrel[®], Humira[®], Simponi[®], Remicade[®], Cimzia[®] and others. With these as well as other drugs available, it can be hard to know which one is best for you or if you should continue your current therapy.

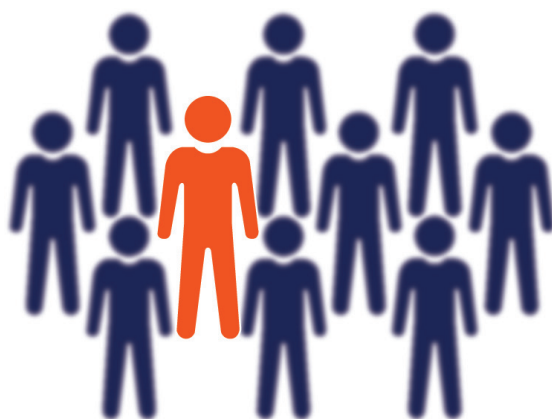

Based on information from the PrismRA[®] test, your provider may find that TNF inhibitor therapy is a solid choice for you or that a different type of medication might give you the best chance of feeling better.

There's a new way to select your medication for rheumatoid arthritis

Rheumatoid arthritis (RA) is complex and affects every person differently. Because of this, it makes sense that each person should have a unique treatment approach.

There are many medications that are used to treat RA. However until now, doctors had no way of knowing if one was more likely to work for you over another.

Now there's the PrismRA test— a first-of-its-kind personalized test that helps your doctor prescribe or change your medication with more information, based on your unique biology.

We see and treat the individual

How is the PrismRA test performed?

The PrismRA test is a routine blood draw. Your blood sample is sent to Scipher Medicine's specialized laboratory for analysis, and your provider will get the results within two weeks.

How does the PrismRA test work?

The PrismRA test is a laboratory test that tells you if TNF inhibitor therapies are less likely to work for you.¹ Once you know, you can avoid them and instead try something else.

Every person is different and will respond to medications differently. The PrismRA test analyzes your unique biology and helps you and your doctor find medications that are a better choice for you.

Ask your provider if the PrismRA test can help find the right RA treatment for you.

Order the PrismRA test when your doctor is starting or changing your RA medication

Studies show that patients have the best chance for long-term relief when they respond well to their medication.² Maximize your window of opportunity and let PrismRA help your provider find the right medicine for you.

Advancing research in rheumatoid arthritis

Scipher Medicine uses anonymous results from the PrismRA test to uncover new breakthroughs in precision medicine.

When you have your PrismRA test performed, you not only help yourself, but you may help others through ongoing research. Future research using your blood sample is completely voluntary, and you can choose to opt-out at any time.

For more information, or to withdraw from future research, contact us at dataprivacy@scipher.com or 855-724-7437

Help is here

If you have questions or concerns about your coverage or ability to pay for testing, please contact Customer Service at **855-724-7437**. We will work with you, one on one, to determine how we can best support you.

Every person is unique and responds differently to medicine. The PrismRA lab test can help your doctor select the best drug for you.
